

Envora Corp ? 2025 Sustainability Report

Executive Summary

In fiscal year 2025, Envora Corp continued its transition toward a low-carbon, circular business model. Scope 1 and 2 emissions fell 18% year over year, driven by a shift to renewable electricity across our European facilities. This report summarises progress against our Environmental, Social, and Governance (ESG) commitments and outlines targets for 2026.

Environmental Performance

- Total greenhouse gas emissions: 42,300 tCO₂e (down from 51,600 in 2024)
- Renewable electricity: 74% of total consumption (target: 100% by 2030)
- Water withdrawal reduced 12% through closed-loop cooling systems
- Waste diverted from landfill: 88%, with a goal of zero waste by 2028
- Product packaging is now 61% recycled or compostable material

Social Responsibility

- Workforce gender balance: 46% women, 54% men across all levels
- 100% of suppliers screened against our Responsible Sourcing Code
- Zero fatalities and a lost-time injury rate of 0.3 per 200,000 hours
- USD 2.1 million invested in local community education programmes
- Living wage certified in 9 of our 11 operating countries

Governance

- The Board's Sustainability Committee meets quarterly and reviews all climate-related financial disclosures aligned with the TCFD framework.
- Executive compensation is linked to emissions-reduction milestones.
- An independent third party assured the emissions data in this report.
- Our anti-corruption training reached 98% of employees in 2025.

2026 Targets & Outlook

Envora will invest USD 15 million in on-site solar generation, pilot a product take-back scheme in three markets, and publish a Scope 3 emissions baseline covering the full supply chain. We remain committed to a science-based net-zero pathway by 2045.
